HG-7240HW04216P01	A	New	20230301

Contents

1. Basic Specifications

1.1 Display Specifications

1) Display Mode: Passive Matrix
2) Display Color: Monochrome (White)
3) Drive Duty: 1/40 Duty

1.2 Mechanical Specifications

1) Outline Drawing: According to the annexed outline drawing
2) Number of Pixels: 72 × 40
3) Panel Size: 12 × 11 × 1.25 (mm)
4) Active Area: 9.196 × 5.18 (mm)
5) Pixel Pitch: 0.128 × 0.13 (mm)
6) Pixel Size: 0.108 × 0.11 (mm)
7) Weight: 0.34g

1.5   Pin Definition

Pin Number	Symbol	I/O	Function
Power Supply			
7	VDD	P	**Power Supply for Logic** This is a voltage supply pin. It must be connected to external source.
6	VSS	P	**Ground of Logic Circuit** This is a ground pin. It acts as a reference for the logic pins. It must be connected to external ground.
16	VCC	P	**Power Supply for OEL Panel** This is the most positive voltage supply pin of the chip. A stabilization capacitor should be connected between this pin and V_{SS} when the converter is used. It must be connected to external source when the converter is not used.
Driver			
15	VCOMH	O	**Voltage Output High Level for COM Signal** This pin is the input pin for the voltage output high level for COM signals. A capacitor should be connected between this pin and V_{SS}.
DC/DC Converter			
5	VBAT	P	**Power Supply for DC/DC Converter Circuit** This is the power supply pin for the internal buffer of the DC/DC voltage converter. It must be connected to external source when the converter is used. It should be connected to V_{DD} when the converter is not used.
3 / 4 1 / 2	C1P / C1N C2P / C2N	I	**Positive Terminal of the Flying Inverting Capacitor** **Negative Terminal of the Flying Boost Capacitor** The charge-pump capacitors are required between the terminals. They must be floated when the converter is not used.
Interface			
10	RES#	I	**Power Reset for Controller and Driver** This pin is reset signal input. When the pin is low, initialization of the chip is executed. Keep this pin pull high during normal operation.
8	BS1	I	**Communicating Protocol Select** These pins are MCU interface selection input. See the following table: |	BS1	
---	---	---
I^2C	1	
4-wire SPI	0		
9	CS	I	**Chip Select** This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low.
11	DC	I	**Data/Command Control** This pin is Data/Command control pin. When the pin is pulled high, the input at D7~D0 is treated as display data. When the pin is pulled low, the input at D7~D0 will be transferred to the command register. When the pin is pulled high and serial interface mode is selected, the data at SDIN will be interpreted as data. When it is pulled low, the data at SDIN will be transferred to the command register. In I^2C mode, this pin acts as SA0 for slave address selection. For detail relationship to MCU interface signals, please refer to the Timing Characteristics Diagrams.
12~14	D0,D1,D2	I	**Host Data Input/Output Bus** When serial mode is selected, D1 will be the serial data input SDIN and D0 will be the serial clock input SCLK. When I^2C mode is selected, D2 & D1 should be tired together and serve as SDA_{out} & SDA_{in} in application and D0 is the serial clock input SCL.

2. *Absolute Maximum Ratings*

Parameter	Symbol	Min	Max	Unit	Notes
Supply Voltage for Logic	V_{DD}	-0.3	4	V	1, 2
Supply Voltage for Display	V_{CC}	0	11	V	1, 2
Supply Voltage for DC/DC（Internal DC/DC Enable）	*V_{bat}*	*-0.3*	*4.5*	*V*	*1, 2*
Operating Temperature	T_{OP}	-40	70	°C	
Storage Temperature	T_{STG}	-40	85	°C	3
Life Time (450 cd/m^2)		1,500	-	hour	4
Life Time (150 cd/m^2)		10,000	-	hour	4
Life Time (80 cd/m^2)		30,000	-	hour	4

Note 1: All the above voltages are on the basis of "V_{SS} = 0V".

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 3. "Optics & Electrical Characteristics". If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.

Note 3: The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80°C.

Note 4: V_{CC} = 9V, T_a = 25°C, 50% Checkerboard.
Software configuration follows Section 4.4 Initialization.
End of lifetime is specified as 50% of initial brightness reached. The average operating lifetime at room temperature is estimated by the accelerated operation at high temperature conditions.

3. Optics & Electrical Characteristics

3.1 Optics Characteristics

Characteristics	Symbol	Conditions	Min	Typ	Max	Unit
Brightness (V$_{CC}$ Supplied Externally)	L$_{br}$	Note 5	350	-	-	cd/m^2
Brightness (V$_{CC}$ Generated by Internal DC/DC)	*L$_{br}$*	*Note 6*	*120*	*150*	*-*	*cd/m^2*
C.I.E. (White)	(x) (y)	C.I.E. 1931	0.25 0.29	0.29 0.33	0.33 0.37	
Dark Room Contrast	CR		-	2000:1	-	
Viewing Angle			-	Free	-	degree

* Optical measurement taken at V$_{DD}$ = 2.8V, V$_{bat}$ = 3.8V& V$_{CC}$ = 9V.
  Software configuration follows Section 4.4 Initialization.

3.2 DC Characteristics

Characteristics	Symbol	Conditions	Min	Typ	Max	Unit
Supply Voltage for Logic	V$_{DD}$		1.65	2.8	3.3	V
Supply Voltage for Display (Supplied Externally)	V$_{CC}$	Note 5 (Internal DC/DC Disable)	8.5	9	9.5	V
Supply Voltage for DC/DC	*V$_{BAT}$*	*Internal DC/DC Enable*	*3.5*	*3.8*	*4.2*	*V*
Supply Voltage for Display (Generated by Internal DC/DC)	*V$_{CC}$*	*Note 6 (Internal DC/DC Enable)*	*-*	*7.5*	*-*	*V*
High Level Input	V$_{IH}$	I$_{OUT}$ = 100µA, 3.3MHz	0.8×V$_{DD}$	-	V$_{DD}$	V
Low Level Input	V$_{IL}$	I$_{OUT}$ = 100µA, 3.3MHz	0	-	0.2×V$_{DD}$	V
High Level Output	V$_{OH}$	I$_{OUT}$ = 100µA, 3.3MHz	0.9×V$_{DD}$	-	V$_{DD}$	V
Low Level Output	V$_{OL}$	I$_{OUT}$ = 100µA, 3.3MHz	0	-	0.1×V$_{DD}$	V
Operating Current for V$_{DD}$	I$_{DD}$		-	180	300	µA
Operating Current for V$_{CC}$ (V$_{CC}$ Supplied Externally)	I$_{CC}$	Note 7	-	7	10	mA
Operating Current for V$_{BAT}$ (V$_{CC}$ Generated by Internal DC/DC)	*I$_{BAT}$*	*Note 8*	*-*	*7.1*	*12.1*	*mA*
Sleep Mode Current for V$_{DD}$	I$_{DD, SLEEP}$		-	1	10	µA
Sleep Mode Current for V$_{CC}$	I$_{CC, SLEEP}$		-	2	10	µA

Note 5 & *6*: Brightness (L$_{br}$) and Supply Voltage for Display (V$_{CC}$) are subject to the change of the panel
             characteristics and the customer's request.
Note 7:   V$_{DD}$ = 3V, V$_{CC}$ = 9V, 100% Display Area Turn on.
Note 8:   *V$_{DD}$ = 3V, V$_{bat}$ = 3.8V, 100% Display Area Turn on.*
* Software configuration follows Section 4.4 Initialization.

3.3 AC Characteristics

3.3.1.1 **I2C Interface Timing Characteristics:**

Symbol	Description	Min	Max	Unit
FSCL	SCL Clock Frequency	-	400	KHZ
T_R	Signal rise time	-	300	ns
T_F	Signal rise time	-	300	ns
TSU;STA	Start condition Setup Time	600	-	ns
THD;STA	Start condition Setup Time	600	-	ns
TSU;DAT	Data Setup Time	100	-	ns
THD;DAT	Data hold Time	300	-	ns
TSU;STO	Setup time for STOP condition	600	-	ns
TBUF	Bus free time between a STOP and STRAT	1300	-	ns

* (V_{DD} - V_{SS} = 2.4V to 3.3V, T_a = 25°C)
3.3.1.2 I^{2}C Interface with Internal Charge Pump

特别提醒(Special Tips): 主板设计务必加电子开关，否则，可能引起漏电流现象

(When design main board, Please add Electronic Switch circuit, otherwise, will be caused leak current)

Recommended Components:

C1,:   0.1μF / 6.3V, X5R
C2:   4.7μF / 6.3V, X5R
C3:   2.2μF/ 16V, X7R
C4:   4.7μF / 16V, X7R
C5:   0.1μF / 16V, X7R
C6,C7:   1μF / 16V, X7R
R2, R1:   47kΩ
R4, R5:   4. 7kΩ
Q1:   FDN338P
Q2:   FDN335N
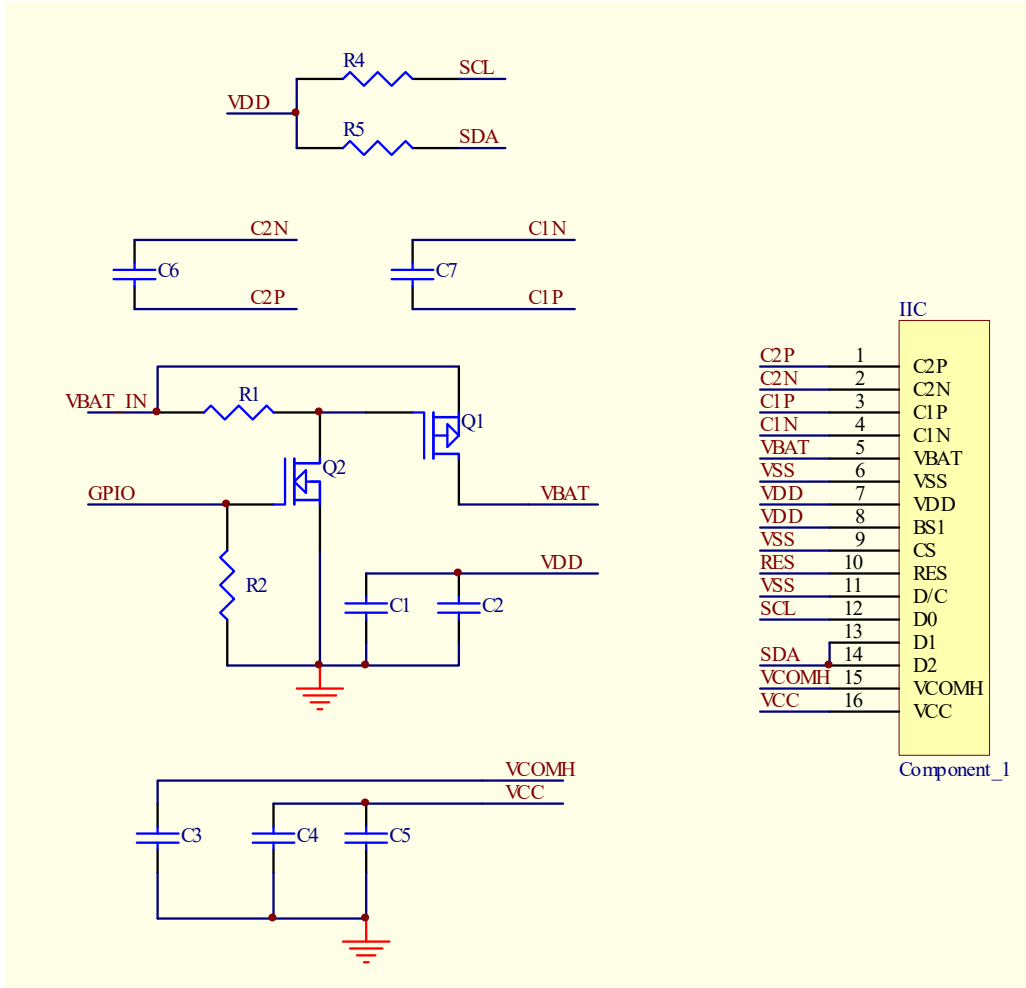

Notes:
VDD: 1.65~3.3V, it should be equal to MPU I/O voltage.
VBAT_in: 3.5~4.2V

3.3.2.1 Serial Interface Timing Characteristics: (4-wire SPI)

Symbol	Description	Min	Max	Unit
T_{SCYC}	Clock Cycle Time	100	-	ns
T_{SHW}	SCL H puise width	20	-	ns
T_{SLW}	SCL L puise width	20	-	ns
T_{SAS}	A0 Address Setup Time	15	-	ns
T_{SAH}	A0 Address Hold Time	15	-	ns
T_{SDS}	Data Setup Time	15	-	ns
T_{SDH}	Data hold Time	15	-	ns
T_{CSS}	Chip select setup Time	20	-	ns
T_{CSH}	Chip select hold Time	10	-	ns

* ($V_{DD} - V_{SS}$ = 2.4V to 3.3V, T_a = 25°C)
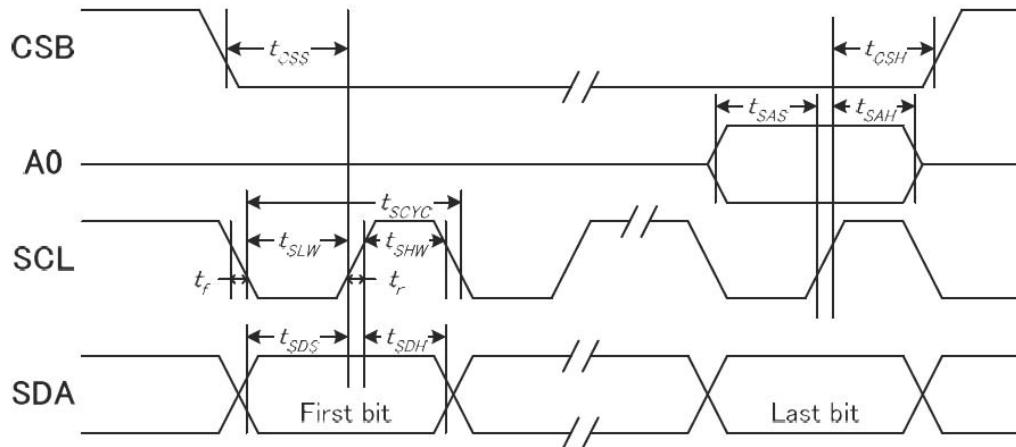

3.3.2.2 **4-wire Serial Interface with Internal Charge Pump**

特别提醒(Special Tips):主板设计务必加电子开关, 否则, 可能引起漏电流现象

(When design main board, Please add Electronic Switch circuit, otherwise, will be caused leak current)

Recommended Components:

C1:	0.1μF / 6.3V, X5R
C2:	4.7μF / 6.3V, X5R
C3:	2.2μF/ 16V, X7R
C4:	4.7μF / 16V, X7R
C5:	0.1μF / 16V, X7R
C6,C7:	1μF / 16V, X7R
R2, R1:	47kΩ
Q1:	FDN338P
Q2:	FDN335N
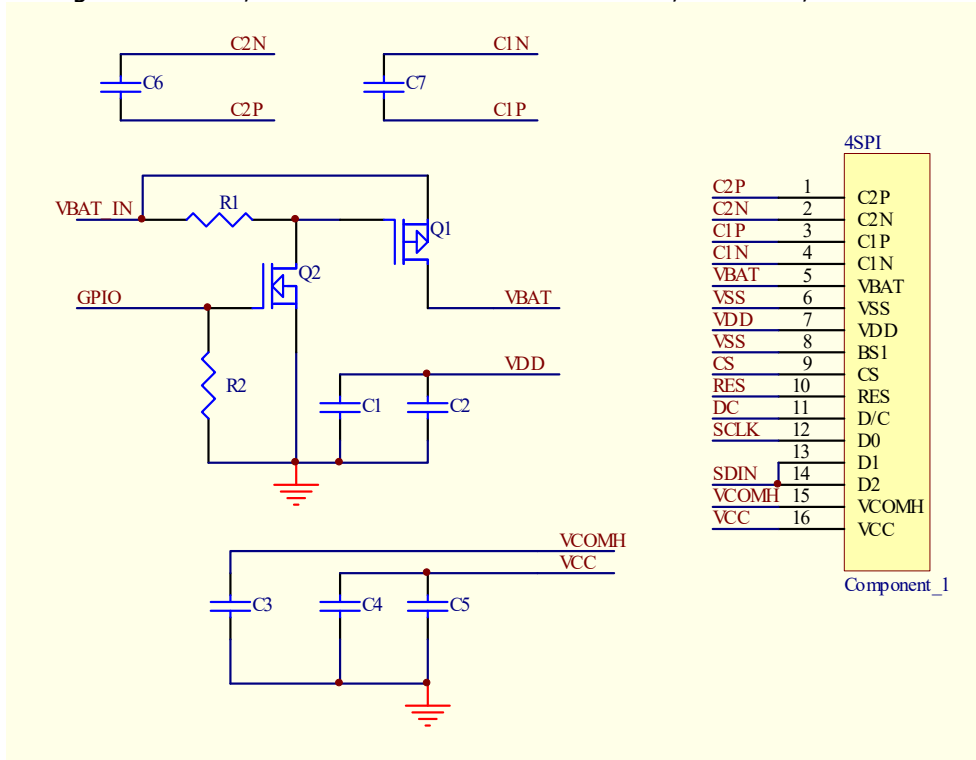

Notes:

VDD:	1.65~3.3V, it should be equal to MPU I/O voltage.
VBAT_in:	3.5~4.2V

4. Functional Specification

4.1 Commands

Refer to the Technical Manual for the ST7315

4.2 Power down and Power up Sequence

To protect OEL panel and extend the panel life time, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off.   It gives the OEL panel enough time to complete the action of charge and discharge before/after the operation.

4.2.1 Power up Sequence:

1. Power up V_{DD}
2. Send Display off command
3. Initialization
4. Clear Screen
5. Power up V_{CC}/ V_{BAT}
6. Delay 100ms
    (When V_{CC} is stable)
7. Send Display on command
4.2.2 Power down Sequence:

1. Send Display off command
2. Power down V_{CC} / V_{BAT}
3. Delay 100ms
    (When V_{CC} / V_{BAT} is reach 0 and panel is completely discharges)
4. Power down V_{DD}
Note 13:
1) Since an ESD protection circuit is connected between V_{DD} and V_{CC} inside the driver IC, V_{CC} becomes lower than V_{DD} whenever V_{DD} is ON and V_{CC} is OFF.
2) V_{CC} / V_{BAT} should be kept float (disable) when it is OFF.
3) Power Pins (V_{DD}, V_{CC}, V_{BAT}) can never be pulled to ground under any circumstance.
4) V_{DD} should not be power down before V_{CC} / V_{BAT} power down.

4.3 Reset Circuit

When RES# input is low, the chip is initialized with the following status:
1. Display is OFF
2. 128×64 Display Mode
3. Normal segment and display data column and row address mapping (SEG0 mapped to column address 00h and COM0 mapped to row address 00h)
4. Shift register data clear in serial interface
5. Display start line is set at display RAM address 0
6. Column address counter is set at 0
7. Normal scan direction of the COM outputs
8. Contrast control register is set at 7Fh
9. Normal display mode (Equivalent to A4h command)

4.4   Actual Application Example

Command usage and explanation of an actual example

4.4.1 V_{CC} Supplied Externally

Low Temperature Storage	-40°C, 240 hrs	
High Temperature/Humidity Operation	60°C, 90% RH, 120 hrs	
Thermal Shock	-40°C ⇔ 85°C, 24 cycles 60 mins dwell	

* The samples used for the above tests do not include polarizer.
  Please note that the reliability test project requires the use of virgin samples
* No moisture condensation is observed during tests.

5.2 Failure Check Standard

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5°C; 55±15% RH.

6. Outgoing Quality Control Specifications

6.1 Environment Required

Customer's test & measurement are required to be conducted under the following conditions:

Temperature:	$23 \pm 5°C$
Humidity:	$55 \pm 15\%$ RH
Fluorescent Lamp:	30W
Distance between the Panel & Lamp:	$\geq$ 50cm
Distance between the Panel & Eyes of the Inspector:	$\geq$ 30cm

Finger glove (or finger cover) must be worn by the inspector.
Inspection table or jig must be anti-electrostatic.
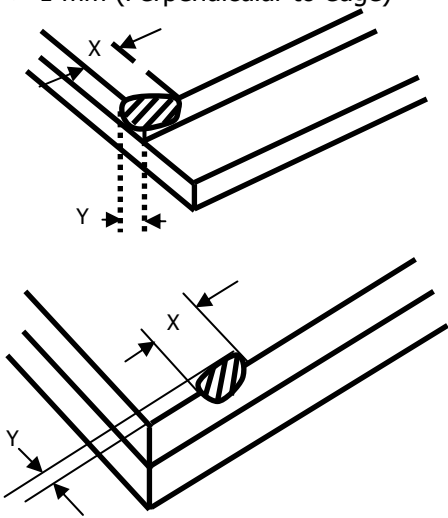

6.2 Sampling Plan

Level II, Normal Inspection, Single Sampling, MIL-STD-105E
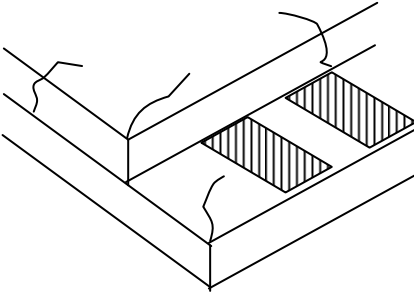

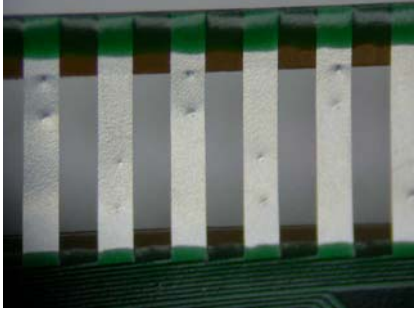

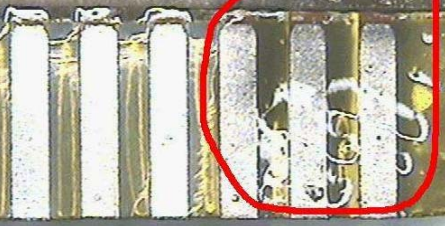

6.3 Criteria & Acceptable Quality Level

Partition	AQL	Definition
Major	0.65	Defects in Pattern Check (Display On)
Minor	1.0	Defects in Cosmetic Check (Display Off)

6.3.1 Cosmetic Check (Display Off) in Non-Active Area
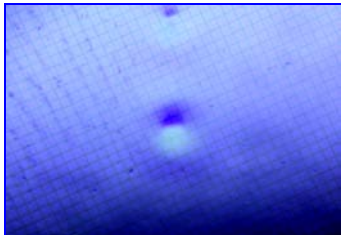

Check Item	Classification	Criteria
Panel General Chipping	Minor	X > 6 mm (Along with Edge) Y > 1 mm (Perpendicular to edge)

Check Item	Classification	Criteria
Panel Crack	Minor	Any crack is not allowable.
Copper Exposed (Even Pin or Film)	Minor	Not Allowable by Naked Eye Inspection
Film or Trace Damage	Minor	
Terminal Lead Prober Mark	Acceptable	
Glue or Contamination on Pin (Couldn't Be Removed by Alcohol)	Minor	
Ink Marking on Back Side of panel (Exclude on Film)	Acceptable	Ignore for Any

6.3.2 Cosmetic Check (Display Off) in Active Area

It is recommended to execute in clear room environment (class 10k) if actual in necessary.
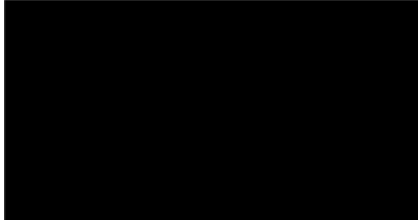

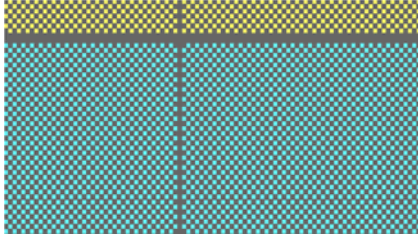

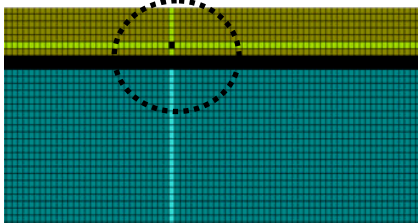

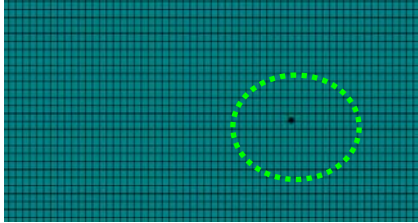

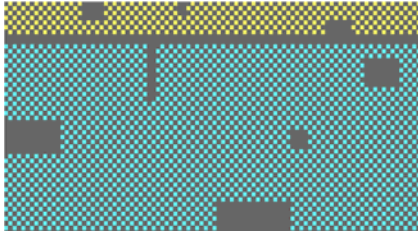

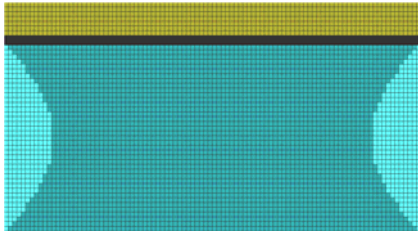

Check Item	Classification	Criteria
Any Dirt & Scratch on Polarizer's Protective Film	Acceptable	Ignore for not Affect the Polarizer

Scratches, Fiber, Line-Shape Defect (On Polarizer)	Minor	W ≤ 0.1 Ignore
		W > 0.1
		  L ≤ 2 n ≤ 1
		  L > 2 n = 0

Dirt, Black Spot, Foreign Material, (On Polarizer)	Minor	$\Phi \leq 0.1$ Ignore $0.1 < \Phi \leq 0.25$ n ≤ 1 $0.25 < \Phi$ n = 0
Dent, Bubbles, White spot (Any Transparent Spot on Polarizer)	Minor	$\Phi \leq 0.5$ → Ignore if no Influence on Display $0.5 < \Phi$ n = 0
Fingerprint, Flow Mark (On Polarizer)	Minor	Not Allowable

*   Protective film should not be tear off when cosmetic check.

** Definition of W & L & Φ (Unit: mm): $\Phi = (a + b) / 2$

L

W

b: Minor Axis

a: Major Axis
6.3.3 Pattern Check (Display On) in Active Area

Check Item	Classification	Criteria
No Display	Major	
Missing Line	Major	
Pixel Short	Major	
Darker Pixel	Major	
Wrong Display	Major	
Un-uniform	Major	

7. Package Specifications

x 1 pcs (Empty)

Module

Tray 420x285mm

x A pcs

Staggered Stacking

Wrapped with adhesive tape
x B pcs

Vacuum packing bag

EPE PROTECTTIVE
370mm x 280mm x 20mm

Primary L450mm x W 296 x H110,B wave
x C pcs

Label

Carton Box L464mm x W 313mm x H472mm ,AB wave
(Major / Maximum)

B Pcs Tray Vacuum packing

EPE PROTECTTIVE

Primary Box C SET

CARTON BOX

Item		Quantity	
Module		1350	per Primary Box
Holding Trays	(A)	15	per Primary Box
Total Trays	(B)	16	per Primary Box (Including 1 Empty Tray)
Primary Box	(C)	1~4	per Carton (4 as Major / Maximum)

8. Precautions When Using These OEL Display Modules

8.1 Handling Precautions

1) Since the display panel is being made of glass, do not apply mechanical impacts such us dropping from a high position.
2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
3) If pressure is applied to the display surface or its neighborhood of the OEL display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
4) The polarizer covering the surface of the OEL display module is soft and easily scratched. Please be careful when handling the OEL display module.
5) When the surface of the polarizer of the OEL display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
   * Scotch Mending Tape No. 810 or an equivalent
   Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy.
   Also, pay attention that the following liquid and solvent may spoil the polarizer:
   * Water
   * Ketone
   * Aromatic Solvents
6) Hold OEL display module very carefully when placing OEL display module into the system housing. Do not apply excessive stress or pressure to OEL display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.
7) Do not apply stress to the driver IC and the surrounding molded sections.
8) Do not disassemble nor modify the OEL display module.
9) Do not apply input signals while the logic power is off.
10) Pay sufficient attention to the working environments when handing OEL display modules to prevent occurrence of element breakage accidents by static electricity.
    * Be sure to make human body grounding when handling OEL display modules.
    * Be sure to ground tools to use or assembly such as soldering irons.
    * To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
    * Protective film is being applied to the surface of the display panel of the OEL display module. Be careful since static electricity may be generated when exfoliating the protective film.
11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OEL display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5).
12) If electric current is applied when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

8.2 Storage Precautions

1) When storing OEL display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps. and, also, avoiding high temperature and high humidity environment or low temperature (less than $0\,^{\circ}$C) environments.   (We recommend you to store these modules in the packaged state when they were shipped from Hicenda Technology Co., Limited..) At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.
2) If electric current is applied when water drops are adhering to the surface of the OEL display module, when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

8.3 Designing Precautions

1) The absolute maximum ratings are the ratings which cannot be exceeded for OEL display module, and if these values are exceeded, panel damage may be happen.
2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the V_{IL} and V_{IH} specifications and, at the same time, to make the signal line cable as short as possible.
3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (V_{DD}). (Recommend value: 0.5A)
4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
5) As for EMI, take necessary measures on the equipment side basically.
6) When fastening the OEL display module, fasten the external plastic housing section.
7) If power supply to the OEL display module is forcibly shut down by such errors as taking out the main battery while the OEL display panel is in operation, we cannot guarantee the quality of this OEL display module.
8) The electric potential to be connected to the rear face of the IC chip should be as follows: SH1106
   * Connection (contact) to any other potential than the above may lead to rupture of the IC.

8.4 Precautions when disposing of the OEL display modules

1) Request the qualified companies to handle industrial wastes when disposing of the OEL display modules.   Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.

8.5 Other Precautions

1) When an OEL display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur.
   Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored.   Also, there will be no problem in the reliability of the module.
2) To protect OEL display modules from performance drops by static electricity rapture, etc., do not touch the following sections whenever possible while handling the OEL display modules.
   * Pins and electrodes
   * Pattern layouts such as the FPC
3) With this OEL display module, the OEL driver is being exposed.   Generally speaking, semiconductor elements change their characteristics when light is radiated according to the principle of the solar battery.   Consequently, if this OEL driver is exposed to light, malfunctioning may occur.
   * Design the product and installation method so that the OEL driver may be shielded from light in actual usage.
   * Design the product and installation method so that the OEL driver may be shielded from light during the inspection processes.
4) Although this OEL display module stores the operation state data by the commands and the indication data, when excessive external noise, etc. enters into the module, the internal status may

be changed.   It therefore is necessary to take appropriate measures to suppress noise generation or to protect from influences of noise on the system design.

5)   We recommend you to construct its software to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.

Warranty:

The warranty period shall last twelve (12) months from the date of delivery. Buyer shall be completed to assemble all the processes within the effective twelve (12) months. Hicenda Technology Co., Limited.. shall be liable for replacing any products which contain defective material or process which do not conform to the product specification, applicable drawings and specifications during the warranty period.   All products must be preserved, handled and appearance to permit efficient handling during warranty period.   The warranty coverage would be exclusive while the returned goods are out of the terms above.

Notice:

No part of this material may be reproduces or duplicated in any form or by any means without the written permission of Hicenda Technology Co., Limited.. reserves the right to make changes to this material without notice.   Hicenda Technology Co., Limited.. does not assume any liability of any kind arising out of any inaccuracies contained in this material or due to its application or use in any product or circuit and, further, there is no representation that this material is applicable to products requiring high level reliability, such as, medical products.   Moreover, no license to any intellectual property rights is granted by implication or otherwise, and there is no representation or warranty that anything made in accordance with this material will be free from any patent or copyright infringement of a third party.   This material or portions thereof may contain technology or the subject relating to strategic products under the control of Foreign Exchange and Foreign Trade Law of Taiwan and may require an export license from the Ministry of International Trade and Industry or other approval from another government agency.
